Response to ECG, September 2015

Respuesta al ECG de septiembre de 2015

Manuel Martínez-Sellés

Departamento de Cardiología, Hospital Universitario Gregorio Marañón, Universidad Europea y Universidad Complutense, Madrid, Spain

The ECG shows right bundle branch block and an SI, QIII, TIII pattern. Urgent echocardiogram showed a very dilated right ventricle. Given the high probability of pulmonary thromboembolism, fibrinolysis was performed. At 24 hours, computed tomography confirmed bilateral pulmonary thromboemboli and also showed type B aortic dissection (Figure).

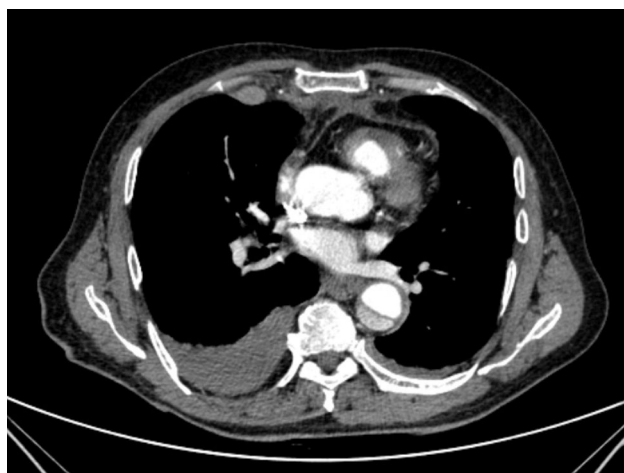

Figure.
