**Corrección en el artículo de Cabrera Bueno et al. «Obstrucción dinámica intraventricular izquierda inducida por esfuerzo».  
Rev Esp Cardiol. 2004;57:1179-1187**

An error has been reported in the article by Cabrera Bueno et al., “Dynamic Left Ventricular Outflow Tract Obstruction Induced by Exercise”, published in Rev Esp Cardiol. 2004;57:1179-1187.

On page 1184, right column, under the heading “Usefulness of Outflow Tract Diameter as a Predictive Parameter of Exercise-Induced DLVOTO”, the units of measurement of the left ventricular outflow tract diameter are incorrectly given in cm/m<sup>2</sup> instead of mm/m<sup>2</sup>.

Thus, the correct diameter of the left ventricular outflow tract is 9.25 mm/m<sup>2</sup>.

This correction was introduced in the online version of the article on 10 June, 2017 and can be consulted at: <http://www.revespcardiol.org/en/obstruccion-dinamica-intraventricular-izquierda-inducida/articulo/13069889/>
